Team Details

- a. Team name: DhanSakhi
- b. Team leader name: Prakhar Singh Tomar
- c. Problem Statement: Digital Wealth Management

Brief about the idea

DhanSakhi gives every IDBI customer a personal robo-advisor.

- One-tap RBI Account Aggregator consent pulls ALL their holdings (bank, MF, demat, EPF, NPS, insurance).
- AI builds goal-based plans and an explainable, suitability-aware portfolio.
- Every recommendation carries a plain-language 'why' — no black boxes.
- A vernacular conversational advisor (Google Gemini) answers anything, in 6 languages.
- Goals map to real IDBI + LIC products (FD, MF, NPS via IDBI POP, LIC insurance/annuity).

Why now: AA covers 2.61B accounts / 252.9M users (Dec 2025); IDBI already owns the distribution shelf and LIC (~49% owner). Advice today is HNI-only — DhanSakhi democratises it.

Opportunities

How is it different?

- AA-native aggregation (no CAS/PDF imports that INDmoney & HDFC SmartWealth still need).
- Explainable AI rationale vs black-box curation or rule-based recommendations.
- Vernacular advisor in 6 languages — depth almost no competitor offers.

How does it solve the problem?

- One 360° view; AI risk-profile → target allocation → rebalancing with reasons; goal plans funded by the right IDBI/LIC product.

USP: 'Trust of a bank + intelligence of a super-app' — the intersection no standalone app or bank tool owns.

List of features offered by the solution

- KYC-lite onboarding (DigiLocker/Aadhaar-style, paperless)
- RBI Account Aggregator consent artefact (purpose, scope, expiry, one-tap revoke)
- 360° net-worth dashboard (bank + FD + MF + demat + EPF + NPS + LIC)
- AI risk profiling → Conservative / Moderate / Aggressive, explained
- Goal-based planning (retirement, education, home, emergency) with SIP-to-goal math
- Explainable portfolio advice + rebalancing ('why this, why now')
- Vernacular conversational advisor (Gemini, 6 languages, suitability-aware)
- IDBI + LIC cross-sell engine (next-best-product mapped to goal gaps)
- Trust & compliance layer (SEBI guardrails, DPDP consent, no-PII)
- Cross-sell ROI model (benchmark-anchored revenue projection for IDBI)

Process flow diagram or Use-case diagram

Golden path (end-to-end):

1) KYC-lite onboarding → 2) AA consent & 360° aggregation → 3) AI risk profile →
4) Goal-based plan → 5) Explainable advice & rebalance → 6) Vernacular advisor chat → 7) IDBI/LIC cross-sell

Actors: Customer · DhanSakhi AI · RBI Account Aggregator (FIP→FIU) · IDBI core & product catalog · LIC · SEBI-RIA (human-in-loop).

Trigger: customer opens DhanSakhi inside IDBI net-banking and grants one consent to see and plan their whole financial life.

Outcome: a funded, explainable plan + the single best next product + an advisor they can ask anything, in their language.

A few questions to understand you

Your answers set a suitable, SEBI-aligned target allocation.

1. If your ₹1,00,000 investment dropped to ₹80,000 in a month, you would...

Sell everything immediately

Sell a part to limit losses

Hold and wait it out

Invest more at lower prices

2. What is your primary investment objective?

Protect my capital

Steady, predictable income

Balanced growth

Maximise long-term growth

3. How many years before you need this money?

Under 3 years

3-5 years

6-10 years

More than 10 years

4. Your experience with market-linked investments is...

None – only FDs/savings

A little – some mutual funds

Comfortable – SIPs & stocks

Very experienced

5. A stable job and emergency fund mean my income is...

Uncertain

Somewhat stable

Stable

Very secure with surplus

Synthetic demo data. No real PII. SEBI (SOP) feature preview.

Architecture diagram of the proposed solution

Customer (web/mobile, in IDBI net-banking)

▼ HTTPS

Next.js 16 App Router on Vercel — Onboarding · Dashboard · Goals · Explainable Advice · Advisor · Cross-sell (React 19 + Tailwind + Recharts)

▼ server route handlers

AA Connector (simulated FIP→FIU consent) | Recommendation Engine (deterministic TS) | Gemini API (advisor + explainability, no-key fallback) | IDBI + LIC Catalog

▼

Synthetic data store (no real PII). POC path → IDBI core banking + live AA FIU + SEBI-RIA review workflow.

Technologies to be used in the solution

- **Frontend:** Next.js 16 (App Router), React 19, TypeScript, Tailwind CSS v4, Recharts
- **AI & logic:** Google Gemini (2.5 Flash) via Google Gen AI SDK; deterministic TS engine (risk, goals, rebalancing); explainability layer
- **Integrations & infra:** RBI Account Aggregator (FIU), IDBI core + LIC/NPS catalog, DigiLocker/Aadhaar KYC, Vercel
- **Compliance:** SEBI IA guardrails, DPDP Act 2023, synthetic/no-PII, Bhashini-ready vernacular

Estimated implementation cost

- Prototype (done): this app — $\approx$ ₹0 (open-source + free tiers)
- Pilot / Sandbox (3–4 months): live AA FIU, IDBI core + LIC APIs, RIA workflow, security review — ₹35–55 L
- Production (6–9 months): scale infra, vernacular (Bhashini), DPO/DPIA, mobile app — ₹1.2–1.8 Cr
- Run-rate: cloud + Gemini API + AA consent fees + support — ₹20–40 / active user / year

Mostly variable, usage-based costs; AA + Gemini (free tier available) + Vercel keep fixed costs low. Payback driven by cross-sell uplift.

Snapshots of the prototype

A working, deployed product — not mockups:

Prototype Performance report/Benchmarking

Prototype metrics:

- 360° aggregation (6–8 institutions, simulated): < 2 s
- Explainability coverage of recommendations: 100%
- Advisor reply latency: ~1–3 s (Gemini) / < 50 ms (fallback)
- Languages supported: 6 • Uptime without API key (graceful fallback): 100%

Projected impact (industry benchmarks, labelled as projections):

- Cross-sell conversion lift ~6× (2% → ~12%) • Revenue uplift 25–40%
- Illustrative incremental revenue ₹4.8 Cr / campaign • Payback < 18 months
- Vernacular PoC (literature): +41% task completion, +86% session length vs English-only

Additional Details/Future Development

- **Near term:** live AA FIU integration; IDBI core + LIC/NPS APIs; SEBI-RIA review workflow; mobile app + WhatsApp advisor.
- **Mid term:** Bhashini voice in 22 languages; auto-rebalance & SIP execution (EOP); tax-harvesting & family dashboard; proactive nudges.
- **Long term:** predictive churn & life-event triggers; RM co-pilot (B2B2C); open-finance marketplace; financial inclusion at PMJDY scale.
